What is R Markdown?

*... integrating source code, statistical output, and text in R Markdown is **a model of reproducibility**.*

Such transparency facilitates comprehension, defensibility, and further research or testing.

R Markdown helps to bring the vision for reproducibility in statistical analysis articulated by Gentleman & Temple Lang [2004] to reality.

- Udwin & Baumer 2015, 'R Markdown', arXiv.org

What is R Markdown?

This vision — in which the barriers to verify another's statistical computations from start to finish are low — is the intellectual descendant of Claerbout [1994], Buckheit & Donoho [1995], and began with Knuth [1984], the creator of TEX.

Moreover, R Markdown is dynamic: each time the document is rendered, the commands therein are run anew. If data are altered or different data are called in advance of rendering, then the output is dependent and calculated accordingly.
